Quick Guide
HOW TO: SEKONIC LIGHT METER

STEP 1
Set the ISO (speed) in the small window in the center circle.

STEP 2
Hold the light meter next to your subject, and point the white dome directly towards the camera lens.

STEP 3
Press the silver button in the middle and release to measure the intensity of light, indicated by the red needle in foot-candles (fc).

STEP 4
Adjust to outer dial until the black triangle points at the measured intensity.

STEP 5
Read the inner ring to find your desired shutter-speed, and the outer ring to find the corresponding f-stop.

STEP 6
Make these adjustments on your camera to obtain proper exposure.
